Uninterrupted  
Power Supply  
Systems

**DESIGN    INSTALLATION    SERVICE    REPAIR**

## Don't let this happen to you

The role a UPS system plays in protecting critical and sensitive electronic infrastructure is vital in ensuring a consistent flow of electricity, preventing damage and potential failure.

Although a suitably operating and serviced UPS system is not mandatory for sensitive electronic equipment, it makes good business sense to consider having such equipment installed and maintained annually.

Unfortunately, the need for good reliable backup power is often overlooked until it is too late.

Would you like to discuss your UPS system requirements or get a obligation free assessment on your current system?

Contact us on 1300 040 362  
so we can organise an appointment  
with a UPS technical specialist.
